Kutsch Lojenga & Waag 2004 = Constance Kutsch Lojenga; Christine Waag. The sounds and tones of Fur. In: *Occasional Papers in the Study of Sudanese Languages*, 9, pp. 1-25. // Detailed description of Fur phonology.

Waag 2010 = Christine Waag. *The Fur Verb and its Context*. Köln: Rüdiger Köppe Verlag. // A special monographic treatment of the complicated verbal system of Fur. Includes some morphological and lexical data (on verbs) unavailable in other sources.

II. Amdang.

Wolf 2010 = Katharina Wolf. *Une enquête sociolinguistique parmi les Amdang (Mimi) du Tchad. Rapport Technique*. SIL International. // A sociolinguistic survey of the Amdang language, including 227-item wordlists collected from speakers in four different villages.

Darfur. In: *Nilo-Saharan Language Studies*. Ed. by M. Lionel Bender. Michigan: East Lansing, pp. 42-79. // A condensed report on the authors' fieldwork with various languages of the Wadai-Darfur area, including excerpts from P. Doornbos' lexical data on Biltine (Amdang).

Jungraithmayr 1971 = Hermann Jungraithmayr. How many Mimi languages are there? In: *Africana Marburgensia*, 4, 2, pp. 62-69. // A small wordlist collected by the author from speakers of the "Mimi" language, which, upon close survey, turns out to be different from the previously attested "Mimi" languages and is now reliably identified as a dialect of Amdang.

NOTES

1. General

I. Fur.

Despite the large number of Fur speakers, a definitive dictionary of the language, from which a 100% reliable Swadesh wordlist could be derived, is still lacking. Because of this, our main source for Fur data remains [Jakobi 1990], a detailed description of the language's phonology and grammar whose general accuracy may be trusted; however, it is impossible to construct a complete lexicostatistical wordlist out of its data, so we have to rely on additional sources for completeness - such as the newer, more condensed (but well illustrated by examples) description [Kutsch Lojenga & Waag 2004], as well as the monograph on Fur verbal morphology written by Ch. Waag [Waag 2010]. On the whole, Jakobi's and Waag's data are in mutual agreement, so using all of these sources to fill in primary slots seems permissible.

As an additional control source, we use [Beaton 1968] (in 5 cases, we even have to select it as our primary source): in terms of phonetic accuracy, this is a highly questionable resource, but it also contains a large amount of lexical data, unavailable elsewhere.

Note: Fur is known to have a very complex system of verbal morphophonology, including allomorphs that are widely different from each other in shape, yet can be derived from each other through a set of formal rules (e. g. 'to burn': *su-* / *=uy-*, etc.). We follow the general outlines of A. Jakobi's internal reconstruction and, when filling the

primary slot, place the allegedly more phonetically archaic allomorph first, and its contextually transformed alternant in the second place.

II. Amdang.

The main source on the relatively recently discovered language of Amdang (= Biltine or "Jungraithmayr's Mimi" in earlier sources), and the only one that allows it to be included into meaningful lexicostatistical analysis, is [Wolf 2010], a sociolinguistic survey with a complete 227-item list for four subdialects of the language as spoken in four different villages in the Biltine department of Chad. Since lexical differences between the four subdialects are very few (not exceeding 10 items on the Swadesh list), and since we cannot properly vouch that these represent genuine lexicostatistical discrepancies and not semantic inaccuracy on the part of the researcher, we only select data from one village (Sounta) in the primary slot. Data from the other three villages (Kouchane, Yaouada, Tere) are listed in the comments section.

For the sake of completeness, the comments section also includes data from earlier sources on Amdang: [Jungraithmayr 1971], the first paper to mention the very existence of this language, and [Doornbos & Bender 1983]. Wordlists given in both of these sources are very small, but on the whole, seem to agree fairly well with the more recent and detailed data in [Wolf 2010]. An ongoing problem is the morphological segmentation of forms given in all sources of Amdang, especially verbal ones: it seems that Amdang has a complicated system of verbal morphology, comparable to Fur, but no clear description of it has appeared so far, meaning that segmentation decisions have to be taken based on systematic structural analysis of the lexical evidence.

2. Transcription

I. Fur.

Fur has a relatively simple phonological system, and differences between systems used by specific researchers, UTS, and IPA are minimal. Only a few notes are necessary.

(a) The voiced palatal plosive (affricate?) is written as *j* in [Jakobi 1990] and in [Kutsch

Lojenga & Waag 2004] = UTS ȝ.

(b) Palatal and velar nasals are respectively transcribed as ɲ and N in [Jakobi 1990] = UTS ɲ and ɳ (same way also in [Kutsch Lojenga & Waag 2004]).

(c) Long vowels are written as doubled *aa*, *ee*, *oo*, etc. in [Jakobi 1990] = UTS *a:*, *e:*, *o:*, etc.

(d) In [Jakobi 1990], Fur is analyzed as a 5-vowel language; in [Kutsch Lojenga & Waag 2004], the authors introduce three additional phonemes - i, v, ɔ. We reflect all these differentiations in our transcription.

(e) Fur has two tonal registers, High and Low; in [Jakobi 1990], only Low is marked with a gravis (ᬁ), whereas High remains unmarked. Conversely, in [Kutsch Lojenga & Waag 2004] Low tone is unmarked and High tone is marked with an acute diacritic. We consistently mark both High as Ḷ and Low as Ḵ.

II. Amdang.

[Wolf 2010] consistently uses IPA to transcribe Amdang data, requiring only the usual "cosmetic" amendments for UTS: thus, Wolf's *tʃ* = UTS č, *dʒ* = UTS ȝ, *j* = UTS ȳ. It should be noted that Wolf's transcription is generally phonetic rather than phonological, for instance, consistently marking aspiration (*k^h*, *t^h*, etc.), even though there does not seem to be any real phonological opposition between aspirated and non-aspirated allophones of simple voiceless plosives in Amdang. Nevertheless, we do not make any efforts to "phonologize" the transcription, since no detailed phonetic/phonological description of Amdang has been published so far that would allow to make definitive conclusions.

1. ALL

Fur *kúl* (-1), Amdang *k^hamil* (2).

References and notes:

Fur: Jakobi 1990: 126. Probably borrowed from Arabic. Quoted as *kul* in [Beaton 1968: 61]. Additionally, cf. *nét* 'all' in [Kutsch Lojenga & Waag 2004: 13].

Amdang: Wolf 2010: 73. Subdialectal forms: *kamil* ~ *kamin* (Kouchane), *k^hamil* (Tere). Differently in Yaouada: *zvkh^ho* 'all'. Another Tere equivalent is *t^him* 'all'.

2. ASHES

Fur *dì*: (1).

References and notes:

Fur: Waag 2010: 43. Quoted as *di*: in [Beaton 1968: 35].

3. BARK

Fur *k=àwgà* # (1), Amdang *?afalak* (1).

References and notes:

Fur: Kutsch Lojenga & Waag 2004: 9. Meaning glossed as 'bark, shell'; not clear if this is truly the default equivalent for 'tree bark'. Not attested in Jakobi's data.

Amdang: Wolf 2010: 70. Subdialectal forms: *?fork^ho* (Tere). Differently in Yaouada: *?ada* 'bark'.

4. BELLY

Fur *d=iò* (1), Amdang *d=o* (1).

References and notes:

Fur: Jakobi 1990: 58. Plural: *k=idò-ŋà*. Singular form *dìò* is explained by Jakobi as a metathesis from **ido* due to the reinterpretation of *-d-* as the singular prefix. Quoted as *dìò* 'stomach' in [Kutsch Lojenga & Waag 2004: 13]. Quoted as sg. *d=iò*, pl. *k=i:tɔ-ŋa* in [Beaton 1968: 33] (note the complete regularity of the paradigm as opposed to newer data; this may suggest that *d=io* is really some sort of dissimilation from **d=ito*). On the other hand, cf. the compound formation *tar-iŋ d=iɔ*, pl. *ta:r-ŋaj k=i:tɔ-ŋa* 'sole (of foot)', literally 'leg-belly', where the paradigm is precisely the same as in Jakobi's and Waag's data.

Amdang: Wolf 2010: 69. Plural: *k=otv*. Subdialectal forms: sg. *d=o*, pl. *k=oto* (Kouchane), sg. *d=o*, pl. *k^h=vt^ho* (Yaouada), sg. *d=o*, pl. *k=ot^ho* (Tere). Quoted as *d=ò* in [Jungraithmayr 1971: 63]; as *d=ù:* in [Doornbos & Bender 1983: 65].

Fur *k=èwà* (1), Amdang *č=o:* (1).

References and notes:

Fur: Jakobi 1990: 86. *Plurale tantum*. According to Jakobi, prefix *k=*, suffix *-a*, and low tone on the root all carry the function of plural marking. Quoted as *k=èwà* in [Kutsch Lojenga & Waag 2004: 15]. Quoted as *k=ewa* in [Beaton 1968: 33].

Amdang: Wolf 2010: 69. Subdialectal forms: *č=o:* (Kouchane), *č=ou* (Yaouada, Tere). Initial *č=* is identified as the result of contraction and palatalization (**k=Io:* > **kʷ=oo:* > *čo:*) based on external evidence from Fur.

Amdang: Wolf 2010: 71. Subdialectal forms: *z=uni* (Kouchane). Differently in Yaouada (*fi:fo*), and in Tere (*t^hawun'u*). Most of the forms are morphologically non-transparent, and it is also unclear whether they refer to transitive or intransitive usage.

Fur: Jakobi 1990: 127. The first component is 'person' q. v.; the second is sg. *d=è*; pl. *k=è-à* 'male (human)' [Jakobi 1990: 89]. The compound expression is encountered in the following textual example: "Where did you ever see a male person giving birth?"

Amdang: Wolf 2010: 69. Probably a suppletive paradigm: sg. *kɔʃt*, pl. *k=adi-ŋɔ*. Cf. sg. *kɔdi*, pl. *kadi-ŋɔ* (Kouchane); sg. *kʰɔrdi*, pl. *kʰardi-ŋɔ* (Yaouada); sg. *kʰɔrdi*, pl. *kʰardi-ŋɔ* (Tere). For two subdialects, a form with *d=* is also quoted: Kouchane *d=edi*, Tere *d=idi ~ d=idi-gn̩j*. Amdang: Wolf 2010: 69. Subdialectal forms: *d=vwal* (Kouchane), *d=owal* (Yaouada), *d=ow'al* (Tere).

Cf. also a separate entry: 'cou (l'extérieur)', glossed as Sounta, Kouchane, Tere *gor:t* [Wolf 2010: 70]. It is unclear what is meant by this opposition; if 'cou (l'extérieur)' is really supposed to mean 'neck', whereas *kɔrm* 'cou' is really 'throat', the primary entry should be replaced.
